Data Science June Batch Major Project

Problem Statement:-

Business Problem spam emails are something we've all experienced. spam mail, often known as junk mail, is an email that is sent to a large number of people at once,sometimes with cryptic messages, scams, or, most dangerously, phishing information. The problem here is that the email needs to be classified as spam or ham based on the content of the mail.Now your task is to build a automated **DS** solution which able to classify
whether SMS is spam or not.

Deadline to submit:- 31st July

Submission process:-
                                     - File can be in PDF or Doc
